Special Features for Convenience & Grocery Stores

- Powerful support for Non-PLU (price-inclusive) barcodes
- Automatic tax adjustment for EBT payments (FoodStamps)
- Integrated features to support weighing scales

WHY OUR SOFTWARE BELONGS TO AN EXCLUSIVE CLUB ?

WYSIWYG Designers
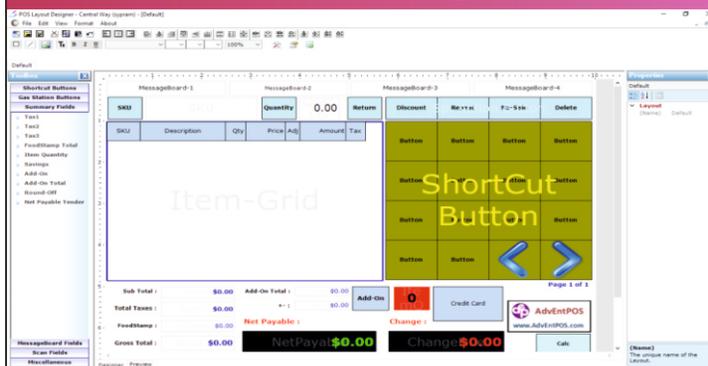

Unlike other softwares, you don't get stuck with the awkward screen layout that comes with the software and you have no choice but to use it. In our software, you can design your own layouts for POS screens, Shelf Labels, and Receipts. Most important of all, even a non-technical person can use these features with ease.

Credit Card Processing

PCI-Compliance is number one priority for all credit card processing. We continuously strive to keep pace with credit card processing technology and always integrate with state-of-the-art tools, technologies and devices. Currently, we have provided a built-in interface to process credit, debit, and Foodstamp cards. Support for EMV chips and mobile payment is integrated. Besides, we work with most payment gateways (e.g., for FirstData, Heartland, WorldPay, etc.)

Network Resilience

This is the most critical of all features. When your computer network fails or the hard-drive of your server crashes, it creates an emergency situation with most other softwares. It also results in a significant loss of business if not fixed immediately. Our system is designed from ground up so that even in case of a network failure, all your registers work seamlessly with-out any interruption. Not only that, but the data are synchronized immediately and automatically as soon as your network is restored.
